

Massachusetts Department of Public Health

Arbovirus Surveillance Program Report

Key Public Risk Communication Messages for This Week:

MDPH reported 15 EEE positive mosquito samples, from Barnstable and Plymouth Counties. Risk levels in the region are elevated. MDPH also reported 48 WNV mosquito samples collected this season. Personal protection measures are recommended due early season arbovirus detections and above average mosquito vector populations across the state.

Check your risk levels throughout the season by visiting our interactive site <https://www.mass.gov/info-details/massachusetts-arbovirus-update>

Intense regional precipitation events and warm weather will support populations of WNV and EEE mosquito vectors. Avoid mosquito bites by using EPA approved repellents, appropriate clothing and avoiding peak mosquito activity between dusk and dawn. Remove standing water by emptying containers and tarps.

Please review the 2024 MDPH Surveillance and Response Plan for updates to risk levels and risk messaging.

WNV and EEE Virus Surveillance Summary	
Results contained in this report reflect data up to and inclusive of MMWR Week 30 (Sunday, 07/21/2024-Saturday, 07/27/2024)	
Mosquito Surveillance	
Number of Mosquito Samples Tested	3992
Number of WNV Positive Samples	48
Number of EEE Positive Samples	15
Equine/Mammal Surveillance	
Number of Mammal Specimens Tested	2
Number of WNV Positive Horses	0
Number of EEE Positive Horses	0
Number of other WNV Positive Mammals	0
Human Surveillance	
Number of Human Specimens Tested	42
Number of Human WNV Cases	0
Number of Human EEE Cases	0
